Code Challenge

Scenario:

Retailers are now required to track employee work hours and breaks and must submit these to Revenue.

Employees are entitled to
- 10mins break per hour worked
- For every 4 hours they get an additional 20min break

 Nightshift workers
- 15mins break per hour worked
- For every 4 hours they get an additional 30min break

Produce a system in a **language of your choosing preferably .NET**. What the system should do:

- Allow Add/view Employees
- Allow employee work hours to be entered
- Display a report of the hours worked

You are free to take as long as you like on this but maybe try limit yourself to only a couple of hours work. Bit of planning beforehand will help. There is some detail/logic provided and some requirements but outside of this you are free to produce what you like and how you like it. **Given this freedom please try to showcase your knowledge/ skill as best you can**.
